

Inukshuk Professional Dog Food

Offers the highest energy dog food available in the industry today to meet the specific requirements of highly active dogs.

By giving dogs the energy they require during high performance activities, Inukshuk helps with quick recovery, avoidance of weight loss issues, superior tissue repair and maintenance, and superior digestibility and palatability.

Our Specialized Formulas

- Includes high levels of nutrition due to high quality human-grade animal protein and fat ingredients
- Is created using a nutrient infusion process
- Is manufactured with human food safety protocols
- Packaged in foil bags with an one-way valve for freshness
- Highly concentrated formula allows for smaller feeding portions, reducing both cost and G.V.D. (bloat)

THE COREYTEC™ INFUSION PROCESS

Healthy fats are an especially important ingredient in a carnivore's diet. During the CoreyTec™ Infusion Process, air is vacuumed out completely from the production chamber, forcing nutrient-rich and flavour-dense oils to permeate the kibble. This process provides a clean, dry, nutritious food with a high level of healthy fats. Which means your dog gets the same nutrition and satisfaction from a smaller portion of food.

THE COREYTEC™ FRESHNESS VALVE

Air is an ingredient we prefer to keep out of our pet food. So in combination with special packaging that protects food from air and light, our one-way valve also keeps oxygen out and food fresh. Pet food protected from oxidization delivers healthy fats and vitamins with more potency and flavour.

THE COREYTEC™ FINE GRIND FORMULA

Our aquaculture experience has taught us that the finer the grind, the better the digestibility. We grind ingredients in a specialized hammermill rotating at high speeds, producing a consistency similar to flour, before combining them into our uniquely balanced blends. Fine Grind provides denser pellets, less bag dust, better oral health, and more nutrients going in your pet than coming out.
